OtherThursday, January 23, 2010 As part of my job, I am often asked to do special projects for clients. For some clients, this means we will come up with a new idea or redesign their old one. For others, it may mean I will create a campaign or create a look book. This weekend, I got to work on one of the more interesting projects I've had to work on: the redesign of the Coke Freestyle machine. For those of you who don't know, the Freestyle machine is a drink dispensing machine that can dispense eight different flavors, or packages, of soda. The technology inside allows the machine to automatically dispense the correct soda as you press buttons. In essence, it's like a robot bartender. This particular machine is quite complex. On top of the need to dispense different flavors of soda, the machine is also self-cleaning. To do this, the machine sprays the dispensing cup with a cleaning solution. The cup is then shaken and the machine continues to automatically dispense the soda. If the machine gets so much as a drop on the counter, you have to manually clean it up. This particular machine needed a complete redesign. When I met with the client, they gave me a high level overview of the current machine. I was given a brief of what needed to be done and I created a proposal to create a mock up to be used as a guide for their redesign. To make the design easy to follow, I created graphics that mimicked the experience of using the machine. My concept was to make the experience appear fluid and easy to use, with the ability to change settings. When it came 82157476af
